development

# What is ADSO?

## brief summary

The *software analysis and development* is a technologist degree focused in developing skills in activities related to create software, according to parameters like functional requirements for business logic, with ethical working methods.

## Interests

One of the most interesting aspects of ADSO is about the orientation it gives: instead of *how* to make software, it focusses in *what do I need* to make quality software. Also some of the features I most like are:

### Project-Oriented:

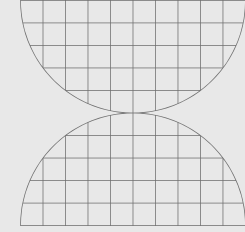

Instead of having a lot of theory and then a project, ADSO focus on a single project to apply the concepts in the program

### Self-Learning

One of the most important aspects is teaching others to teach themselves. They give us the tools to learn and keep looking for additional info for the topics in review

### Balance

ADSO gives us the opportunity to not only create a software but to learn other important topics, like maths and science

## Expectations about ADSO

### ✓ Acquiring skills

One of my most expected concern about ADSO is acquiring skills for different software dev activities like testing, developing, designing, etc.

### ✓ exploring ideas and solutions

This is the most important for me, because people in business requires people not only for coding but for looking for solutions.

### ✓ Become a successful developer

I expect this program to give me the resource to be a capable developer, to be able to work and have a better quality of life
