### Voice Transcript

Hola, mi nombre es Diego Bravo, Soy estudiante de la ficha 2455231 Análisis y desarrollo de software. Esta es la evidencia GA3-240202501-AA2-EV02 Audio y la instructora es Adriana Yaneth Charry Rivera.

Growing at work is a process of sheer responsibility. This means that if we are responsible for our assignments at work, we can start taking leadership positions. Not everyone was born to be a leader, but if you do your job responsibly, you will be able to adapt much better to your work environment and you will be able to be a trained leader when necessary. Is it important to adapt to the work environment due to the constant stress existing when interacting with others and job responsibilities. Adapting is a complex process, but if you manage to adapt to your work environment, your workload will be much easier to carry out.

For example, as a student at SENA, I must submit a lot of evidence related to the field in which I am training, and I also must submit reports at the university. That means I must adapt my time to the amount of evidence to deliver. If I don't do the evidence on time, I won't learn the topic that is being developed.

This is related to many positions of responsibility that I had when I was working. Being a leader was not easy, but if I trained myself and was responsible for the activities I had to do, then I could be a very good and effective leader, helping others to adapt to the work we were doing and training them so that they too could be leaders in the future.

In the end, the amount of work we must do is not so important, but rather that we are responsible and adapt our time and experience to be able to carry out all the assignments that we have both in our work and our education. Therefore, if we are responsible with our education, we will be able to adapt and survive any existing work environment.
